

# CUTTING EDGE

Whether you need it for cooking or fishing, a sharp blade is a necessity – as some thrifty RVers have found!

**I**t's said there are only a few things certain in life: death, taxes, and gradually dulling blades! No matter how sharp your knives start, they're bound to become dull eventually over time. When you're on the road, and especially if dinner is often caught straight off the wharf, it's even more important to have carefully sharpened knives for ease of cutting, and to avoid the risk of injury from a slipped blade.

The Nirey KE-198 from Total Knife Care is a knife sharpener designed for recreational and personal use, and it's compact, simple to use, and good on the budget! In just a few easy seconds, you can turn your dull edges into razor-sharp slicing machines, just like the professionals. It's electrically powered so will run off the 12V system in your caravan or motorhome, and it's so small it'll fit neatly in a cupboard for easy storage.

Designed with safety in mind, the motor and spring-loaded aluminium oxide grinding wheels are securely hid-

den behind four front-facing slots. With no set up necessary, the sharpener will keep your knife steady at a constant, optimum angle and then it's really as simple as sliding the whole blade through the coarse and fine slots for both sides for an evenly sharpened knife that will keep its edge over multiple uses.

There may even be an unexpected benefit in having an electric knife sharpener to hand; as some nomads have found, it could help to create a little pocket money for your trip. It's easy to approach other caravanners or
